How much of a total value is expected from a foreign partner:	Depends on the agreement with a foreign partner
Time period for the realization of the proposed project:	6 months
Time period for exploitation of the proposed project:	Financial study, Market study, Business Plan in process.
Pay-back time period:	2 years

Short Project Description:

Already existing producer of packing materials for fruits (PE carriers of 4, 5, 6, 10, 12, and 15kg) and cheese (3, 5, 10, and 15kg), and pipes for water and irrigation systems, who possesses appropriate processing equipment for up to 2,000 tons of poly-ethylene of low thickness, original and recycled, wants to build a new or equip the existing space with the machines for sorting, grinding, recycling, and mixing of plastic masses so that he could provide raw materials for his own production as well as for the market.

Planned monthly incomes guarantee maintenance of the positive cash flows during the year. Business Plan will be completed by May 10, 2004, while the financial study and market study has already been prepared.

For this project, the company would prefer help from some development organization. Strategic partner would be an option only in case the company would be able to promote and place the recycled packaging materials and products to the foreign market. If a potential investor for such operation would be found, the owner of the local company would be willing to discuss the project in details.
